

FOR LIVE

RADIA

01 GET SET UP 02 THE WHEEL 03 SEARCH 04 YOUR WHEEL 05 SETTINGS 06 HELP

1 · GET SET UP

UP AND RUNNING IN TWO MINUTES

Radia is a small app (in the menu bar on a Mac, the system tray on Windows) plus a helper script that runs inside Live. The first time Radia opens, a short welcome tour connects the two, shows you the moves and sets up your wheel.

1 INSTALL THE APP

Mac: open the **RadiaForLive_Mac** DMG and drag **Radia for Live** onto the **Applications** shortcut, then launch it from Applications. The first time, macOS asks whether to open an app from the internet: click **Open**.

Windows: run the **RadiaForLive_Windows** installer. If Windows shows "Windows protected your PC", click **More info**, then **Run anyway**. The installer also puts the Live helper in place.

Radia then asks for your **licence key**, which is in your receipt email: paste it and click **Activate**. Not bought it yet? Click **Try It Free**: your first 30 opens of the wheel are on us.

2 LET RADIA SEE YOUR KEYS

Mac: on the tour's **Connect Radia to Live** page, click **Open Settings…** and switch Radia on under Accessibility. The light turns green within a couple of seconds.

Windows: nothing to switch on. The light stays green as long as Live isn't run as administrator.

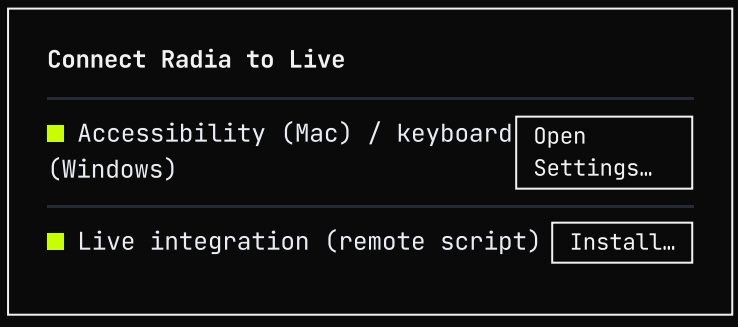

3 CONNECT RADIA TO LIVE

On a Mac, click **Install…** on the same page. Then in Live open **Settings** (Mac) or **Options → Preferences** (Windows), open the tab called **Link, Tempo & MIDI** (one tab), choose **Radia** in an empty Control Surface slot, leave Input and Output on **None**, and restart Live.

With this connected, devices load instantly through Live itself and search covers everything you have installed. Without it Radia still works, by typing into Live's browser for you, which is slower.

4 SET UP YOUR WHEEL

The tour ends by asking how to start: **Build from what I use** puts the five devices and plugins you load most in Live across the top of the wheel, with folders of the rest below (page 5), or keep Live's own devices in folders. You can change everything later.

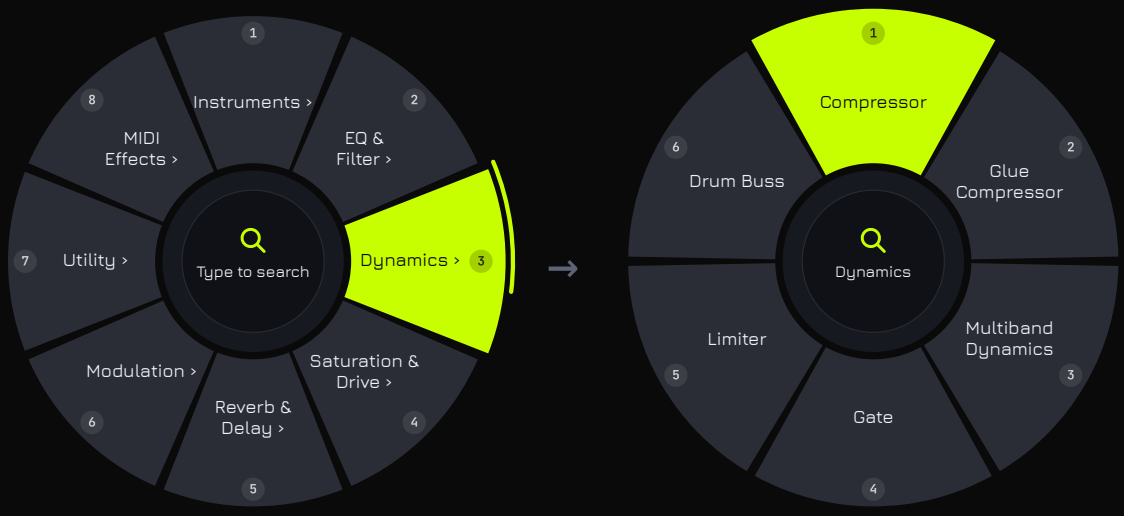

Two green lights and you're done. Reopen these checks any time from Menu Settings → Setup Assistant, or the whole tour from Menu Settings → Welcome Tour.

2 · THE WHEEL

OPEN, POINT, CLICK

With Live in front, double-tap ⇧ Shift. The wheel opens under your cursor.

Left: hovering a folder (marked ›) fills an arc, then opens it. **Right:** inside the folder, click a device to load it.

POINT AND CLICK

Move toward a slice and click it: the device loads on the selected track. The highlight follows the direction you move, so there's no careful aiming. A click outside the wheel closes it.

OR USE THE KEYBOARD

The wheel stays up until you load something or close it, so you can also press a slice's number, or start typing to search.

FOLDERS AND GOING BACK

Rest on a folder to open it. Rest in the centre to step back up a level. Clicking a folder, or the centre hub, does the same.

SWAP A SLICE

Right-click a slice to put something else there: the search list opens and asks what goes in its place. More on page 5.

KEYBOARD

- Number row picks a slice: 1 is 12 o'clock, then 2 … 9 0 - = clockwise. Each slice shows its key.
- Return loads or opens the highlighted slice.
- Esc closes the wheel. So does double-tapping ⇧ again, a click outside it, or clicking the hub at the top level.

MORE THAN 12 ITEMS

A level shows up to 12 slices. Past that, the last slice becomes **More ›**, which moves to the next page.

NEAR A SCREEN EDGE

The wheel slides inward so it's never cut off, and your cursor moves to its centre so every direction still works.

3 · SEARCH & TYPED SHORTCUTS

START TYPING TO FIND ANYTHING

While the wheel is open, type. It turns into a search list in the same spot, covering everything installed in Live.

Results show their type on the right

A shortcut adds a ⚡ row at the top

SEARCHING

- ↑ ↓ or the mouse to choose, **Return** to load, Esc or a click outside to close.
- Finds Live's instruments and effects, your plugins, and the racks and Max for Live devices in your User Library.
- Tags: **VST3**, **VST**, **AU**, **Rack**, **M4L**. Items from your own wheel are tagged **menu** and listed first. Live's own devices have no tag.
- Double-tap ⇧ to swap back to the wheel.

TYPED SHORTCUTS

Type a shortcut and Radia loads a Live device *and sets it up*. For example `hp200` gives you an EQ Eight with a high-pass at 200 Hz. A plain word like `hp` is still just a search.

Shortcuts need the Live connection from step 3 of setup. Samples, clips and single-device presets aren't searched.

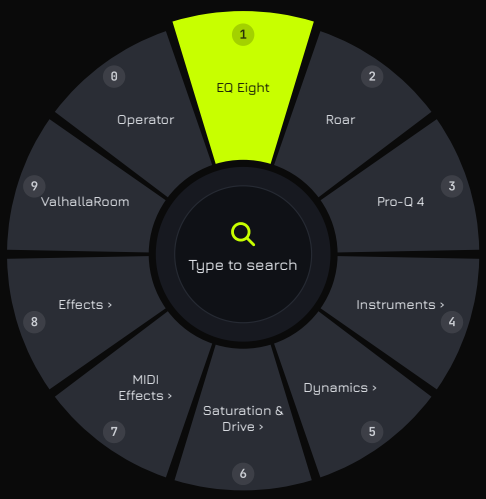

TYPE	LOADS	AND SETS
`hp200` `lp8k`	EQ Eight	High-pass / low-pass there. Add `q5` for resonance.
`bp500`	Auto Filter	Band-pass at that frequency
`gain-3` `pan25` `ms50`	Utility	Gain in dB · pan (minus = left) · mid/side width
`sat50` `sathard`	Saturator	Drive amount · hard-clip curve
`roar30` `roarnoise`	Roar	Drive amount · noise curve
`verb35` `verb35 200`	Hybrid Reverb	Wet amount, optionally decay in ms
`limit4`	Limiter	Input gain in dB
`dly30` `dly1/8` `dly400ms`	Delay	Wet amount · synced time · time in ms

First search after starting Live can take a few seconds while Radia builds its list. After that it's instant.

4 · YOUR WHEEL

MAKE THE WHEEL YOURS

The wheel starts as Live's own devices in folders. Build it from what you actually use in one click, swap slices as you go, and let Radia suggest what's missing.

Built from what you use. The five you load most get a slice each across the top, the most used at 12 o'clock. Below them, folders of the rest of what you load, your own devices first and Live's filling any gaps.

BUILD FROM WHAT I USE

- In the welcome tour, or **Menu Settings → Wheel Items → Build from what I use** any time.
- Radia reads what you load most in Live: your five most used across the top, then the five folders that hold most of the rest (Instruments, Dynamics and so on) across the bottom.
- It replaces your wheel, so Menu Settings asks first, and your old wheel is backed up. Rearrange anything afterwards in Wheel Items.

SWAP A SLICE

With the wheel open, right-click a slice. The search list opens asking what goes there instead (*Replace Glue Compressor with…*); pick something and it takes the slice's place.

SUGGESTIONS

Now and then Radia spots a device you load a lot that isn't on your wheel and offers it, once. Click the offer and it goes first in its folder. Turn this off with **Suggest devices I use a lot** in Menu Settings.

> **You've loaded Serum 2 12 times in Live. Add it to your wheel?** Add to Wheel

WHEEL ITEMS

- Your wheel shows beside the list, as it is and at its real size. Point at it and click into folders to try it; it changes as you do.
- Search in **Add device from Live…** and press **Add**.
- Drag to rearrange. The number beside each item is its slice and its key: `1` at 12 o'clock, then clockwise.
- **+ Folder** makes a submenu (12 entries a level). Double-click renames, `Delete` removes.
- **Find most used items**: drag what you load most onto the wheel.

5 · SETTINGS

HOTKEYS, TRIGGER AND LOOKS

Click the Radia icon in the menu bar (Mac) or system tray (Windows) and choose **Menu Settings**. Everything saves as you go.

HOTKEYS

- Search a device, or type a shortcut such as `hp250` , press **Add**, then press the key you want.
- Example: `[` for an instant 250 Hz high-pass, `]` for a low-pass.
- Hotkeys only fire while Live is in front, and stay quiet while you're typing a name or value in Live.
- Keys Live uses as its computer keyboard piano (`A`–`L`, `W` `E` `T` `Y` `U` `O` `P`, `Z` `X` `C` `V`), plus `B` and `0`, need a modifier such as `^` or `Ctrl`. Space, Tab, Return, Esc, Delete and the arrows can't be used.

HOW THE WHEEL BEHAVES

- **Click outside the wheel to close it**: on to start with. Off, a click anywhere picks the slice in that direction.
- **Submenu hover time**: how long you rest on a folder before it opens.
- **Suggest devices I use a lot**: the offers on page 5.
- **Open and quit with Live**: Radia starts when Live does and quits with it.

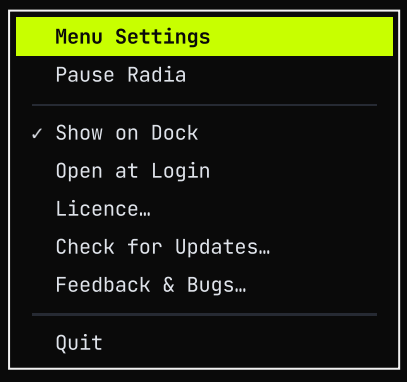

POPUP TRIGGER

OPEN WITH	HOW IT WORKS
Double-tap	Tap the key twice. The default, with `⇧`.
Double right-click	Right-click twice quickly. A single right-click still opens Live's own menu.
Key + Return	Hold the key and press `Return`.
Key + click	Hold the key and click. The click also reaches Live, so pick a key Live ignores.

The key can be `⇧`, `^`, `⌥`, `⌘` on a Mac, or `Shift`, `Ctrl`, `Alt` on Windows, or a combination. Changes apply immediately.

WHEEL APPEARANCE

- **Accent**: the highlight colour.
- **Style**: flat, glass (panes that bend what's behind them), embossed (raised, lit from above) or 1-bit (square pixels, dotted toward the rim, with the names on solid labels).
- **Roundness**: 0 to 100. Rounds every slice's corners; at 100 each slice is a circle.
- **Opacity**: 25% to 100%. For glass, how smoky the panes are.
- **Wheel size**: small to large; the centre scales with it.

The menu-bar or tray icon. Menu Settings has the wheel, hotkeys, trigger and appearance, with Welcome Tour and Setup Assistant at the bottom. **Licence…** shows your key and how many computers it's on. **Feedback & Bugs** sends us a message. **Pause Radia** switches the trigger and hotkeys off until you resume, handy while playing Live's computer keyboard. **Open at Login** starts Radia with your computer. **Check for Updates** installs a new version in one click. On a Mac the same commands are in Radia's menu in the top bar and its Dock menu; Show on Dock is Mac only.

6 · HELP

IF SOMETHING'S OFF

Most problems come down to one of the two green lights in the Setup Assistant.

WHAT YOU SEE	WHAT TO DO
The wheel doesn't open	Mac: check Radia is switched on in System Settings → Privacy & Security → Accessibility. Windows: check Radia is in the tray and Live isn't running as administrator.
A **"Live integration not connected"** badge, or search only finds my wheel items	Radia is typing into Live's browser instead of loading directly. Check Radia is chosen as a Control Surface in Live, then restart Live.
Radia gets in the way for a while	Menu-bar or tray icon → **Pause Radia**. Every key goes straight to Live until you choose Resume Radia.
Radia asks for a licence key	Paste the key from your receipt email, or **Try It Free** for 30 opens. A key works on 3 computers (**Licence…** shows how many it's on); to move it, deactivate it there first.
Radia says a new version is out	Click **Install and Relaunch** (Windows: **Yes**): Radia updates itself and reopens. If it can't, it opens your Lemon Squeezy orders.
Roar or Meld won't load	They're new in Live 12. Live 11 mostly works but doesn't have them.
Anything else	Radia's icon → **Feedback & Bugs** → **Bug report**: say what you did and what you expected, and press **Send**. Radia sends its diagnostics with it, and we reply to your email.

CHEAT SHEET

WHEEL

⇧ ⇧	Open / close
Click a slice	Load
Rest on folder	Open it
Rest in centre	Back
1 … =	Pick slice
Right-click slice	Swap it
Esc / click outside	Close

SEARCH

Type	Start searching
↑ ↓	Choose
Return	Load
⇧ ⇧	Back to wheel
Esc	Close

SHORTCUTS

`hp200`	High-pass
`lp8k q5`	Low-pass + Q
`gain-3`	Trim 3 dB
`verb35`	35% reverb
`dly1/8`	1/8 delay

Where settings live. Three plain text files in a `Radia` folder: in Application Support in your Library on a Mac, in `%APPDATA%` on Windows. `menuconfig.ini` is the wheel, `hotkeys.ini` the hotkeys, `settings.ini` the trigger and appearance. They work on both systems, so you can copy your setup across.
